SUMMARY

Recent B.Tech Graduate in Computer Science with a solid foundation in Python, SQL, HTML, CSS, JavaScript, and Django. Experienced in developing academic projects involving web development, data analysis, and database management. Strong problem-solving abilities, quick learning skills, and a passion for building efficient software solutions. Seeking an opportunity to contribute to a dynamic software development team while continuously enhancing technical expertise.

EXPERIENCE

Centre for Good Governance

Jan 2026 – May 2026
Hyderabad

Data Analyst Intern

- Performed data cleaning, preprocessing, and validation using Excel, SQL, and Python to improve reporting accuracy and efficiency.
- Analyzed structured datasets and developed Power BI dashboards for data visualization, KPI analysis, and business intelligence reporting.
- Prepared analytical reports and automated reporting workflows to support data-driven business decisions.

EDUCATION

B.Tech in Computer Science and Data Science

Nov 2022 – May 2026
Hyderabad

TKR College of Engineering and Technology, Hyderabad, CGPA: 7.5

Intermediate (MPC)

Jun 2020 – Jun 2022
Hyderabad

Impulse Junior College, Hyderabad, Score: 91.2%

SKILLS

- Frontend:** HTML, CSS, Bootstrap, JavaScript
- Backend:** Python, Django
- Databases:** MySQL, MongoDB
- Tools & Platforms:** Git, GitHub, VS Code, Power BI, Excel
- Core Concepts:** OOPs, DSA, DBMS, CRUD Operations, Exception Handling
- Soft Skills:** Problem Solving, Communication, Team Collaboration

PROJECTS

Customer Shopping Behavior Analysis 📄

Technologies: Python, SQL, Power BI

- Developed data analysis workflows using Python and SQL to identify customer purchasing trends and behavior patterns.
- Built interactive Power BI dashboards for business insights and KPI tracking.
- Applied data cleaning and customer segmentation techniques for decision-making support

Road Lane Line Detection Using Python & OpenCV

Technologies: Python, OpenCV

- Developed a lane detection system using Python and OpenCV by applying image processing and computer vision techniques.
- Implemented edge detection and Hough Transform algorithms for accurate lane tracking.
- Enhanced real-time visualization for autonomous driving assistance simulation.
